

Template Week 7 – Host your website on GitHub

Student number: 593201

Domain name (URL) of your website on GitHub:

<https://inforyy.github.io/site/>

Relevant screenshots + motivation:

I found this topic interesting because it explains the basics behind how computers store and process information. Working with bits, bytes, and hexadecimal helped me understand the link between what you see (numbers/characters) and what a system actually uses internally (binary). This gives me a solid foundation for later subjects like subnetting and networking, so it felt useful and relevant to learn.
